About Me

I am a junior fullstack engineer who values honest self-assessment and learning by building. This helps me grow quickly, ask for help early, and give realistic progress updates on real tasks. As part of the Faculty phase of my RevoU program, I am building LearnBridge, a fullstack web application that helps teachers create learning materials and questions anytime, from anywhere. I have implemented automatic grading for multiple-choice questions, so teachers can see results immediately and follow each student's progress. Before moving into tech, I worked in a coffee shop packaging orders, which taught me attention to detail. Through building LearnBridge, I developed technical skills in responsive, mobile-first frontend interfaces with Next.js, TypeScript, and Tailwind CSS, plus REST APIs with NestJS and Prisma ORM, testing endpoints in Postman. Moving forward, I am eager to bring this hands-on mindset to a collaborative engineering team where I can build scalable features, learn rapidly from experienced mentors, and grow into a high-impact fullstack developer.

Education

RevoU **Feb 2026 - Sep 2026**
Completed, Full Stack Software Engineering
Completed a Full Stack Software Engineering program focused on web application development. Gained hands-on experience with Javascript and Typescript in React, Next.Js, PostgreeSQL, Nest.Js, RESTful APIs, Git, Postman, Prisma ORM, and Jest.
Final Project: LearnBridge | Learning Management System
A comprehensive fullstack learning platform designed to connect instructors and students in one interactive experience, featuring class scheduling, learning materials, and student grading systems.
LearnBridge Github | Demo Website

Sarjanawiyata Tamansiswa University of Yogyakarta **Jul 2016 - Oct 2021**
Bachelor of English Education, Education | GPA: 3.01
Thesis Title : The Characterization of The Main Characters of Peter Farrelly's Green Book Movie
Journal

Project Experiences

LearnBridge **| Learning Management System** **Oct, 2026**
Full-stack learning management system (LMS) featuring interactive quizzes, automated grading, course and learning material management, and student performance dashboards. Built using Next.js, React, TypeScript, NestJS, Prisma ORM, and PostgreSQL, with JWT authentication and Google OAuth integration. Deployed the frontend on Vercel and the backend on Railway, using Neon for database hosting.

RevoShop **| E-Commerce Web Application** **July, 2026**
Full-stack e-commerce platform featuring product listings, detailed product views, shopping cart management, a dedicated dashboard for item updates, category-based related products, and seamless client-side navigation. Built using Next.js 16 (App Router), React 19, Tailwind CSS v4, and React Icons. Successfully developed and submitted as part of the RevoU Full Stack Software Engineering Bootcamp milestone project.
RevoShop Github

RevoFun **| Interactive Web-Based Games Collection** **June, 2026**
A collection of interactive web-based games including Whack-a-Mole, Typing Game, Guess Number, Rock-Paper-Scissors, and Memory Card Game. Built using HTML, Tailwind CSS, and JavaScript, featuring real-time timers, score tracking, and a fully responsive design for seamless cross-device gameplay.

Working Experiences

Warehouse Specialist | J & T **Mar 2023 - Jul 2025**

- Unloaded incoming shipments from containers and unpacked parcels from sacks to accelerate individual scanning and processing.
- Scanned incoming parcels to update shipment statuses and tracking information in the warehouse application.
- Sorted parcels according to their destination areas to ensure accurate distribution and minimize delivery errors.
- Prepared outbound shipments by repacking sorted parcels into destination-specific sacks and scanning them to facilitate timely dispatch.

Packager | Space Roastery **Jan 2022 - Dec 2022**

- Prepared roasted coffee beans for packaging by separating stones and foreign materials using a screening process to ensure product quality and purity.
- Weighed coffee beans according to packaging requirements of 2 kg, 1 kg, 500 g, and 200 g to meet specific product standards and customer orders.
- Operated a heat-sealing machine to securely seal coffee packaging and prevent air exposure.
- Packed sealed coffee products into cardboard boxes and attached shipping labels to prepare shipments accurately for delivery.

English Teacher Intern at SMP N 2 Sewon, Bantul, Yogyakarta **Mar 2019 - Jul 2019**

- Delivered classroom lessons in accordance with the national curriculum to ensure educational standards and objectives were met.
- Prepared lesson plans, learning materials, and assignments to support and enhance student learning objectives.
- Monitored student attendance, classroom participation, and academic progress to track performance and identify areas for improvement.
- Evaluated student assignments and examinations to provide constructive feedback and guide student academic growth.

Skills

Technical Skills :

- **Programming Languages:** JavaScript, TypeScript, HTML, CSS
- **Frontend:** Next.js, Tailwind CSS, React.js
- **Backend:** Node.js, NestJS, REST API, JWT Authentication
- **Database & ORM:** PostgreSQL, Prisma ORM
- **Testing & API:** Jest, Postman
- **Cloud Servers / Infrastructure** : Vercel, Supabase, Railway, Neon
- **Version Control & Development Tools:** Git, GitHub, VS Code, Sublime Text
- **AI-Assisted Development:** Claude, Gemini, Antigravity, Github Copilot

Hard Skills :

- REST API Development
- Database Modeling
- Authentication & Authorization
- Responsive Web Design
- Unit Testing

Soft Skills :

- Problem-Solving
- Teamwork
- Time Management
- Flexibility & Adaptability
